

Building for the Future.

When I first articulated my vision for WestGen nearly three years ago, I promised results and positive change. I wanted to secure a long-term future for the Western Canadian producers who'd grown with us for nearly 70 years, as well as for our own WestGen staff. Following the departure of the bulls in 2011, it wasn't hard to see that customers and staff alike were weighed down by a sense of uncertainty towards the future of our company. However, I came to WestGen to build a future, not end it.

Our journey over the past three years has not been easy, but we've faced our challenges head on, and as a team. It was our teamwork that inspired us to keep moving forward, which subsequently lead to the launch of two new subsidiaries- Boviteq West and Cryogen, both of which have exceeded nearly every expectation. We also relaunched the WestGen brand, and in doing so, we sparked a cultural change within the entire organization. Now more than ever, we're a unifying force in the West, and we're one that supports and invests in Western causes.

This July brought a pivotal moment- the Board of Directors gave a unanimous final approval on the construction of our new home. This not only marks the start of a new era for us, but also (and more importantly) it sends a clear message that the WestGen Group of Companies is here to stay. With your continued support and encouragement, we look forward to what the next 70 years will bring.

Chris Parry
CEO,
WestGen Group

Two Years and Going Strong...

This August was the 2nd anniversary of Boviteq West's creation, and we're proud to see the company continuing to flourish as we help more and more people to understand and reap the benefits of our IVF process.

Over the past two years, we've seen a lot of diversity pass through our barns- we've collected from animals with high genomics, deep pedigrees, and globally recognized names, and even beef and dairy donors who were already pregnant. We've seen it all! To date, we've collected oocytes and created embryos from 125 different donors! The impressive diversity and quantity of the donors we've seen reflects the trust our customers have in the service we provide, with many customers bringing in multiple donors.

Their reasons for choosing IVF have varied as much as the donors have. Some seek the early embryo production that comes from being able to collect from animals as young as 7-8 months old, while others need a means to continue embryo production from an animal otherwise no longer able to produce offspring. Many of our customers praise the increased embryo production they benefit from, thanks to the shorter intervals required between collections. Whatever the need or reason, all of our customers agree that IVF is a business option that just makes sense.

Working with Boviteq West IVF technologies has created new opportunities for Hamming Holsteins. This comes both from the rapid production of female embryos from our emerging brood cow and 2014 BC Cow of the Year, Elmbridge Goldwyn Darling VG-88 4*, and use of their high health status recipient herd to help with the timely creation of show age calves.

Brian & David Hamming,
Hamming Holsteins, Vernon, BC

Education has been one of the key factors in Boviteq West's success, and nothing has been more enjoyable than having the chance to sit down with interested individuals and discuss the many benefits of our IVF process.

If you're a Western Canadian producer and you're interested in learning more about the opportunities that Boviteq West can bring to your business, please call us at 778.878.1327 or toll-free at 1.800.657.5613.

You can also email us: customerservice@boviteqwest.com.

HCD: Haplotype Associated with Cholesterol Deficiency

Below is a summary of a CDN Extension Article “Discovering Genetic Anomalies from Genotyping” by Brian VanDoormaal & Lynsay Beavers. For the full article, please visit <https://www.cdn.ca/articles.php>.

In addition to genomic evaluations and integrity of pedigrees, accumulating thousands of genotypes for a given breed results in the discovery of new genetic anomalies. Scientists in Germany recently discovered a new “Haplotype associated with Cholesterol Deficiency” (i.e.: HCD) in Holsteins, which traces back to Maughlin Storm as the oldest genotyped sire of origin. For calves that inherited the undesirable gene from both parents, it was found that they had an increased incidence of chronic/prolonged diarrhea that was untreatable, as well as other illnesses. Examination of blood samples from affected calves showed a cholesterol deficiency that prevented the normal deposition of fat in body tissues. Over the course of months after birth, the affected calves lost all body reserves and it appears that all eventually died. Without the presence of an exact gene test to identify carriers, the current haplotype analysis can result in some animals being falsely labelled as a carrier if they have both Storm and Willowholme Mark Anthony in their pedigree.

HCD Carrier Sires with over 5000 Registered Daughters Born in Canada

Relationship to Maughlin Storm

Sons	Grandsons	Great-Grandsons
PURSUIT SEPTEMBER STORM	BRAEDALE GOLDWYN	GILLETTE WINDBROOK
COMESTAR STORMATIC	GILLETTE FINAL CUT	COMESTAR LAUTHORITY
HARTLINE TITANIC	*DUDOC MR BURNS	GILLETTE STANLEYCUP
LADINO PARK TALENT-IMP	KERNDT STALLION	LIRR DREW DEMPSEY
		COMESTAR LAVANGUARD
		GOLDEN OAKS ST ALEXANDER
		GILLETTE WINDHAMMER

** Dudoc Mr Burns carries the haplotype with the undesirable gene from Storm as well as the haplotype sourced through Mark Anthony. Therefore, genotyping his progeny will not lead to conclusive results about the carrier status of the undesirable gene.*

The methodology used by CDN to calculate the HCD Carrier Probability values (varying from 99% for “Carrier” to 1% for “Free”), reduces this problem by combining the haplotype test with pedigree analysis. Now that this undesirable anomaly is known, an industry effort can easily be made to reduce the frequency that carrier animals are mated together, thereby lowering the frequency that homozygous calves are born and subsequently die within months. The discovery of this genetic condition also demonstrates the value and importance of producers reporting to DHI the date and reason for every animal leaving the herd, including young calves.

WESTGEN HAS TAKEN SWIFT ACTION SINCE THE ANNOUNCEMENT OF THIS NEW GENETIC DISCOVERY. OUR G-MATE SOFTWARE HAS BEEN UPDATED TO PREVENT THE SUGGESTED MATING OF 2 SUSPECTED HCD CARRIERS.

 **G-Mate**
Protects
Against HCD

We suggest producers follow Brian Van Doormaal’s advice: “Any negative impact of these genetic anomalies can be eliminated by avoiding the mating of carrier sires to carrier heifers and cows, which is best achieved using computerized mating programs offered by A.I.” *Carrier Status is available on the Pedigree tab of a CDN.ca Animal Query page.*

Thurl Placement

Canadian classifiers have been evaluating thurl placement for a number of years, but August 2015 represents the first time that Thurl Placement has been an officially published trait. Sires producing daughters with thurls placed **back** are rated with a “B” while sires that are known to produce daughters with thurls further **ahead** are rated with an “A” attached to their numerical score. Sires with a zero rating receive no letter, indicating ideal Thurl Placement. Practically, producers need only select against those sires that significantly move thurls back.

As expected, Thurl Placement is highly correlated with Rump Angle scores.

Team Manitoba

The 31st WCC took place from August 18-22 in Red Deer, Alberta.

With 104 participants competing in the Cowtucky Derby, it was quite a race.

In the end, Team Alberta was declared the Premier Province Cup winner.

Next year's show will be held in Brandon, MB.

MERIDIAN

Photo credit: Patty Jones, Beth Herges and Vicki Fletcher

Left-Right: GILLETTE WALKHAVERN ASLEEP VG-86-2YR-CAN, WEDGWOOD MERIDIAN DELCIE VG-85-2YR-CAN, SANDY-VALLEY MER GLAMOUR VG-87-2YR-USA, CEDARWAL MERIDIAN EBONY VG-86-2YR-CAN, VAL-BISSON MERIDIAN DORIANE VG-88-2YR-CAN 2014 HM ALL-CANADIAN MILKING YEARLING.

Sully Heart **Meridian** joins the proven bull list after an illustrious career as a Genomax sire, and it's safe to say his first crop of milking daughters don't disappoint! Early in his career, Meridian was an interesting sire because of his high type GPA and as he was one of the early Domain (Toystory x Ronelee Outside Dabble) sons, and Domain wasn't available for use in Canada. His maternal pedigree was also increasing in popularity as it delivered one high ranking genomic young sire after the next. His dam, Sully Planet Manitoba VG-85 is a daughter of Sully Shottle May EX-90 DOM 5*, whose notable progeny include Mayfield, McCutcheon and Meteor to name a few. Further back in this line we find Poly-Kow Lindy Mindy, the dam of Semex's Poly-Kow **Mailing**, a popular Superior Type sire.

As his early daughters were born, WestGen Reps often reported on the fancy calves they saw in a variety of herds and eventually in the show ring. The Meridians were stretchy calves with a very dairy cut to them. The Meridian daughters began to calve late last year and it was quickly apparent that he also transmitted exceptional udders, with soft texture and strong attachments. Many notable breeders reported fancy fresh young 2 year olds and the Very Good classification scores started to accumulate.

Once they were a few months into lactation, the other half of the story began to emerge as producers commented on their tremendous production. Reports of many 2 year old daughters producing over 50kg a day were given by progeny analysts Carl Saucier, Jim Biggar and others. The excitement earned him the hashtag **#meridianmonday**, and a special Meridian daughter being featured each week leading up to proof day.

On August 11th, his initial proof was released and it included production records from nearly 500 daughters and conformation data from close to half that many. With 2868 GLPI, he landed at #18 on the list and is one of the most balanced bulls available for production, durability and functional traits. Highlights of his proof include 2006kg of Milk, 52kg of Protein, 13 for Conformation and Mammary Systems, 10 for Feet & Legs, 104 for Daughter Fertility, and 106 for Calving Ability. As his genomic index had predicted, he should be protected for Fat %. As a Repromax sire, he's often noted for his superior settling ability. This makes him a great choice to include in your breeding program as you look for fertile bulls to settle cows this fall that were affected by summer heat stress. Having made many satisfied breeders in western Canada already, and many more daughters in the pipeline, we think the story on Meridian is just beginning.

Ms-Golden Oaks M Calypso

Tuytel Meridian Locklynn
VG-86-2YR-CAN

Newest Genomax Additions

With young Genomax additions becoming an increasingly popular choice for dairy producers, each proof round we carefully consider a host of candidates. With the August update, we have capitalized on the success of Numero Uno and Meridian, as well as the popularity of Doorman in drafting our new candidates.

Boldi ANDRE

Flame x Supersonic

Among the early Numero Uno sons, Vieuxsaule Flame, who never actually made it to our proof sheet, is still among the top for LPI and Pro\$. His early sons are ranking very high as well. As a result we have selected one of his best for LPI and Conformation, Boldi Andre. At +3275 LPI he's our highest rated bull and he combines it with +16 Conformation and an excellent health trait profile.

We've also decided to add **Vieuxsaule Flame** (Numero Uno x Freddie) himself to our list. He carries the same high component, high health profile as Numero Uno, and he's also an **Immunity+** bull. However he's rated considerably higher for Calving Ability.

Ginary DODGE

Diamond x Numero Uno

Ginary Dodge has been added, bringing Numero Uno's influence via the maternal side. His sire Diamond, is a Snowman son and Dodge's production numbers reflect his influence on the mating, especially for milk. On the other hand, his high Herd Life (113) and Daughter Fertility (107) ratings are clearly the influence of Numero Uno.

With +16 for Conformation, Dodge is a "trifecta" sire who is expected to deliver Production, Conformation and Longevity.

KH CINDERDOOR

Doorman x Iota

With the timeline for Doorman's return to active duty unclear, we've added his high ranking son, KH Cinderdoor who offers impressive production (+1566kg M) and outstanding Conformation (+17). Expect big-framed cows excelling in Dairy Strength.

EBA GENTLE
Meridian x Beacon

It seems logical to add the best Meridian sons available in support of their popular sire. EBA Gentle provides high yields (+2336kg M) with double digit ratings for Udders (+10), Feet & Legs (+12) and Dairy Strength (+10). His 107 Calving Ability prediction also follows the pattern of Meridian. Another Meridian son, **Oh-River-SYC Byway** (Meridian x Atwood) is the new #1 PTAT sire in the breed and will get used heavily among US Type enthusiasts as a result. At +17 his Canadian Conformation rating is not too shabby either!

Other additions:

Norca Silky ALONZO
Mascalese x Dempsey

Now available and still tops for Conformation in Canada at +18. His 3144 LPI and 2120 Pro\$ are pretty respectable too!

Boldi V APTITUDE
Davinci x Epic

Combining extreme LPI (3246) and Pro\$ (2489) and solid Type (+12). Dam is a full sister to Airintake, a Genomax sire we promoted in 2014. Aptitude is our highest rated **Immunity+** sire and a slightly different pedigree too.

Gen-I-Beq AKYOL Red
Brekem x Alchemy

For our red enthusiasts, this early Red Brekem son provides a nice balance of Production, Health and Type from a popular cow family.
