# SEMEX BEEF *Brands*

Each bull in the Semex Beef lineup has been carefully chosen with one goal in mind: to help you build a more profitable herd! Below is an overview of the Semex Beef brands which showcase the genetic strengths of the bulls we have to offer. Use these icons to easily identify and select the sires that align with your needs and goals!

CALVING EASE

For fewer difficult calvings, select Calving Ease sires. These sires rank in the top 30% of their respective breed for the Calving Ease Direct EPD and can be used on first calf heifers.

PERFORMANCE

Performance sires will deliver progeny with added growth to increase your profitability. To earn this designation, sires must be high ranking in their respective breed for Weaning Weight and Yearling Weight EPDs.

MATERNAL

The Maternal icon is assigned to sires who excel in a range of maternal traits. Based on EPDs such as TM, MILK and MWWT, it is predicted that their progeny will demonstrate enhanced qualities like higher milk production and improved longevity.

CARCASS WEIGHT

Expect these sires to increase the carcass weight of their progeny as they rank in the top 30% of their respective breed for the Carcass Weight EPD. Increase your profits with an increase in volume of product produced per animal by using these Semex Beef sires!

MARBLING

Focusing on meat quality? Semex Beef Sires in the top 30% of the respective breed with the Marbling designation will increase marbling in their progeny which in result increases the overall quality of meat produced.

RIBEYE AREA

Sires with the Ribeye Area designation rank in the top 30% of their respective breed for the Ribeye Area EPD. These sires are expected to produce progeny with a larger ribeye area and higher percentage yielding progeny, allowing producers to be more profitable.

- ✓ Caldwell is a phenotypic knockout, with impressive length and rib shape, large scrotal, great feet and an athletic presence to him.
- ✓ Proven pedigree as he is sired by the extremely popular Sitz Resilient 10208 and backed by a phenomenal dam who is a full sibling to Tehama Tahoe B767.
- ✓ Caldwell is a Calving Ease sire offering an awesome birth to weaning spread, has an EPD profile that covers all the bases, and is truly a breeding piece that will produce progeny to tip the scales and top sales.

**SMX NAGATAKU**

MAZDA WAGYU MAZATLAN

BD: Jul 9, 2018 | BW: 77 lbs | WW: 624 lbs | YW: - | Scrotal: - | Tenderness: 6 | Quality Grade: AWA

- ✓ Sanmarro has the look! SCD - AA, Horned.
- ✓ Big deep bodied bull to bring some stoutness into your herd while adding high quality marbling.

# COAT COLOUR INHERITANCE IN BEEF CATTLE

THERE ARE A NUMBER OF SETS OF GENES THAT DETERMINE COAT COLOUR IN CATTLE

## THE MOST COMMON SETS ARE:

- Basic coat colour
- Dilution of basic colour
- Inhibitor (ie. Charolais)
- Solid Pattern
- White Face
- Spotted

THERE ARE THREE FORMS OF THE GENE THAT CONTROL COAT COLOUR

**Rb** Black Gene

**R** Red Gene

**r** White Gene

THERE ARE SIX POSSIBLE COMBINATIONS OF BASIC COAT COLOUR:

<b>RbRb</b>	Animal is Black (or Grey)	Homozygous Black
<b>RbR</b>	Animal is Black (or Grey)	Heterozygous Black, Heterozygous Red
<b>RR</b>	Animal is Red	Homozygous Red
<b>Rr</b>	Animal is White	Homozygous White
<b>Rbr</b>	Animal is Black or Grey Roan	Heterozygous Black, Heterozygous White
<b>Rr</b>	Animal is Red Roan	Heterozygous Red, Heterozygous White

Every Animal carries two genes for basic coat colour. An animal homozygous for that gene will breed true and can only pass that type onto his progeny such as RbRb  
Homozygous for Black

EACH ANIMAL CARRIES TWO COPIES OF THE DILUTION GENE

**DD**

Homozygous for dilution and the animal will be Diluted in colour. Dilutes Black to Grey and Dilutes Dark Red to light red or yellow

**dd**

Recessive and Homozygous non-dilution. The animal will not be diluted. Does not dilute black or red colour.

**Dd**

Heterozygous for dilution. The animal will be diluted in colour.

## DILUTION GENE

**D**

Dilution Gene Dominates causing coat colour to be diluted

**d**

Non-Dilution Gene Recessive form of gene. Does not dilute coat colour

# SEXED SEMEN PROTOCOLS

## FIXED-TIME AI

Time for Fixed-time AI (TAI) should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities. To optimize pregnancy success, it is recommended to *use sexed semen on females that have exhibited estrus before TAI* and conventional semen on females that have not exhibited estrus.

### HEIFERS ONLY

#### 7-day CO-Synch+CIDR®

Perform TAI with GnRH at  $72 \pm 2$  hr after PG.

### COWS

#### 7&7 Synch

Perform TAI with GnRH at  $66 \pm 2$  hr after CIDR removal. *All cows can also be inseminated with either sexed or conventional semen.*

### HEIFERS ONLY

#### PG-7 7-day CO-Synch+CIDR®

Perform TAI with GnRH  $72 \pm 2$  hr after second PG. *All heifers can also be inseminated with either sexed or conventional semen.*

## SPLIT-TIME AI (STAI)

Perform first TAI  $66 \pm 2$  hr after PG in estrous females. GnRH administered at second TAI only in non-estrous females. Females detected in estrus by first or second TAI receive sexed semen. Females not in estrus receive conventional semen at second TAI.

### HEIFERS ONLY

#### 14-day CIDR®-PG & STAI

### COWS & HEIFERS

#### 7-day CO-Synch+CIDR® & STAI

**EDA** Aervoe™, AIPaint™, Detect-her™, Estroject™, Kamar™, Mark-her™, Paintstik™, Quick Shot™, Tell Tail™, Twist-Stik™

**GnRH** Cystorelin®, Factrel®, Fertagyl®, OvaCyst®, GONABreed®

**PG** estroPLAN®, Estrumate®, Lutalyse®, Lutalyse® HighCon, ProstaMate®, SYNCHSURE™

# BEEF COW SYNCH PROTOCOLS

## HEAT DETECTION & TAI

For best results perform AI  $12 \pm 2$  hr after detection of estrus.  
Use of estrus detection aids (EDA) is highly recommended.

### Select Synch & TAI

Heat detect & AI days 6 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

### PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Insert CIDR + GnRH to non-responders, heat detect & AI days 9 to 12. TAI with GnRH non-responders 72 - 84 hr after PG and CIDR removal.

*Protocol may be used in heifers.*

### Select Synch+CIDR® & TAI

Heat detect & AI days 7 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

### 7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI  $66 \pm 2$  hr after PG in estrous cows. Second TAI with GnRH only in non-estrous cows.

## FIXED-TIME AI

Time for Fixed-time AI (TAI) should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities.

### 7-day CO-Synch+CIDR®

Perform TAI with GnRH at 60 to 66 hr after PG.

### 7&7 Synch

Perform TAI with GnRH at  $66 \pm 2$  hr after CIDR removal.

### 5-day CO-Synch+CIDR®

Perform TAI with GnRH at  $72 \pm 2$  hr after CIDR removal. Two injections of PG  $8 \pm 2$  hr apart are required for this protocol.

### Bos indicus PG 5-day+CIDR®

Perform TAI with GnRH at  $66 \pm 2$  hr after CIDR removal.

EDA

Aervoe™, AIPaint™, Detect-her™, Estroetect™, Kamar™, Mark-her™, Paintstik™, Quick Shot™, Tell Tail™, Twist-Stik™

GnRH

Cystorelin®, Factrel®, Fertagy®, OvaCyst®, GONABreed®

PG

estroPLAN®, Estrumate®, Lutalyse®, Lutalyse® HighCon, ProstaMate®, SYNCHSURE™

# BEEF HEIFER SYNCH PROTOCOLS

## HEAT DETECTION & TAI

For best results perform AI 12 ± 2 hr after detection of estrus.  
Use of estrus detection aids (EDA) is highly recommended.

### Select Synch+CIDR® & TAI

Heat detect & AI days 7 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

### 7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 54 ± 2 hr after PG in estrous heifers. Second TAI with GnRH only in non-estrous heifers.

### MGA®-PG & TAI

Heat detect & AI days 33 to 36 and TAI with GnRH all non-responders 72 - 84 hr after PG.

### 14-day CIDR®-PG & TAI

Heat detect & AI days 30 to 33 and TAI with GnRH all non-responders 72 ± 2 hr after PG.

## FIXED-TIME AI

Time for Fixed-time AI (TAI) should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities.

### 5-day CO-Synch+CIDR®

Perform TAI at with GnRH 60 ± 4 hr after CIDR removal. Two injections of PG 8 ± 2 hr apart are required for this protocol.

### 7-day CO-Synch+CIDR®

Perform TAI with GnRH at 54 ± 2 hr after PG.

### MGA®-PG

Perform TAI with GnRH at 72 ± 2 hr after PG.

### 14-day CIDR®-PG

Perform TAI with GnRH at 66 ± 2 hr after PG.

### 7&7 Synch

Perform TAI with GnRH at 54 ± 2 hr after CIDR removal.
